# CREATE THE FUTURE OF GREEN, SUSTAINABLE AIRPORTS

Airports are gateways to the world and can lead the way in sustainability! We're searching for innovative ideas that make airports greener and more sustainable. **From energy efficiency to eco-friendly practices, let's build an airport experience that benefits both the planet and passengers.**

## **Energy Efficiency:**

Imagine airports powered by renewable energy sources like solar panels, wind turbines, and smart energy systems. We are implementing renewable energy solutions and are excited to discover and improve innovative ideas together to further enhance energy efficiency and reduce our carbon footprints.

## **Eco-Friendly Facilities:**

Transform airport facilities with sustainable designs and practices. Think green roofs, natural lighting, rainwater harvesting, and energy-efficient heating and cooling. Our facilities incorporate several eco-friendly elements; let's advance them with solutions to make them even more environmentally friendly.

### **Sustainable Transportation:**

Promote sustainable transportation options such as electric shuttle buses, bike-sharing programs, and easy access to public transit. We currently offer sustainable transportation options, but we are eager to explore innovative ideas to further promote green transportation methods for travelers.

### **Green Spaces:**

Introduce nature into the airport experience with indoor gardens, outdoor parks, and green walls. We feature green spaces and are looking for innovative startups with ideas to further enhance air quality, passenger well-being, and overall sustainability.

### **Waste Reduction:**

Implement effective waste reduction and recycling programs. Our airports have comprehensive recycling and waste reduction programs, and we are looking for creative ways to minimize waste and promote sustainability. Join us in our efforts to create a greener future together.

### **Sustainable Dining:**

We are committed to offering eco-friendly dining options, focusing on sustainable packaging and minimizing waste. We are particularly interested in exploring new solutions that promote zero-waste practices and introduce more organic food choices. Let's collaborate to strengthen our dedication to sustainable dining and create an even more environmentally conscious dining experience.
